1ab. We have $f_X(x) = \frac{d}{dx} F_X(x) = \frac{d}{dx} \left( \frac{x-3}{4} \right) = 1/4$ for $3 < x < 7$, and $f_X(x) = 0$ otherwise. So $X$ is a continuous Uniform on $(3, 7)$. Thus $\mathbb{E}(X) = \frac{3+7}{2} = 5$ and $\text{Var}(X) = \frac{(7-3)^2}{12} = 4/3$.

2. Let $X$ denote the number of chocolate chip cookies, so $X$ is Binomial with $n = 112$ and $p = 0.4$. So we get $P(X \geq 50) = P(X \geq 49.5) = P \left( \frac{X - (112)(0.4)}{\sqrt{(112)(0.4)(0.6)}} \geq \frac{49.5 - (112)(0.4)}{\sqrt{(112)(0.4)(0.6)}} \right) \approx P(Z \geq 0.91) = 1 - P(Z \leq 0.91) = 1 - 0.8186 = 0.1814$.

3. We compute $P(Y > X/2) = \int_0^\infty \int_{x/2}^\infty 15e^{-5x-3y} \, dy \, dx = \int_0^\infty -5e^{-5x-3y} \bigg|_{y=x/2}^\infty \, dx = \int_0^\infty 5e^{-13x/2} \, dx = -\left(\frac{10}{13}e^{-13x/2}\right) \bigg|_{x=0}^\infty = 10/13$.

4a. For $x > 0$, we have $f_X(x) = \int_x^\infty 70e^{-3x-7y} \, dy = 10e^{-10x}$; for $x \leq 0$, we have $f_X(x) = 0$.

4b. For $x > 0$, the conditional density is $f_{Y|X}(y | x) = \frac{f_{X,Y}(x,y)}{f_X(x)} = \frac{70e^{-3x-7y}}{10e^{-10x}} = 7e^{7x-7y}$, so we get $f_{Y|X}(y | \frac{1}{10}) = 7e^{7(1/10)-7y}$. Therefore, we conclude $P(Y > 1/4 \mid X = 1/10) = \int_{1/4}^\infty f_{Y|X}(y | \frac{1}{10}) \, dy = e^{-21/20} = 0.3499$.

5a. We compute $\text{Cov}(X_1, X_2) = \mathbb{E}(X_1X_2) - \mathbb{E}(X_1)\mathbb{E}(X_2) = \frac{12}{52}(11/51) - (3/13)^2 = -10/2873$.

5b. We have $\text{Var}(X_1) = \text{Var}(X_2) = \mathbb{E}(X_1^2) - (\mathbb{E}(X_1))^2 = \mathbb{E}(X_1) - (\mathbb{E}(X_1))^2 = 3/13 - (3/13)^2 = 30/169$. So we obtain:

$$\rho(X_1, X_2) = \frac{\text{Cov}(X_1, X_2)}{\sqrt{\text{Var}(X_1)\text{Var}(X_2)}} = \frac{-10/2873}{\sqrt{(30/169)(30/169)}} = -1/51$$.
